

# Intelligent and Agile: IETF effort towards the future Optical Networks

Haomian Zheng  
IETF Routing Area Directorate Chair

NGON Workshop: June 2023

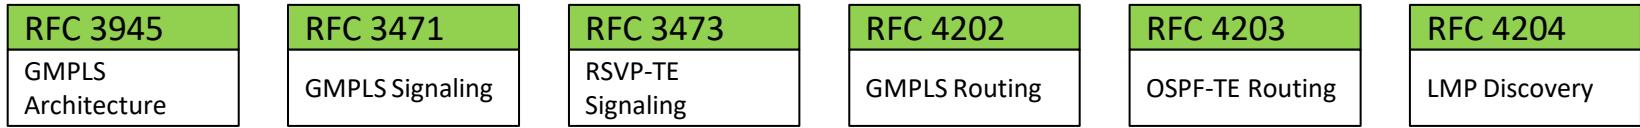

# Outline

- IETF Effort in past decades
  - PCEP/GMPLS from 2005-2015
  - YANG from 2015-Now
- IETF Effort ongoing
  - Intelligence applications
  - Agility protocols
  - Intent-based Networking
  - Digital Twin Architecture

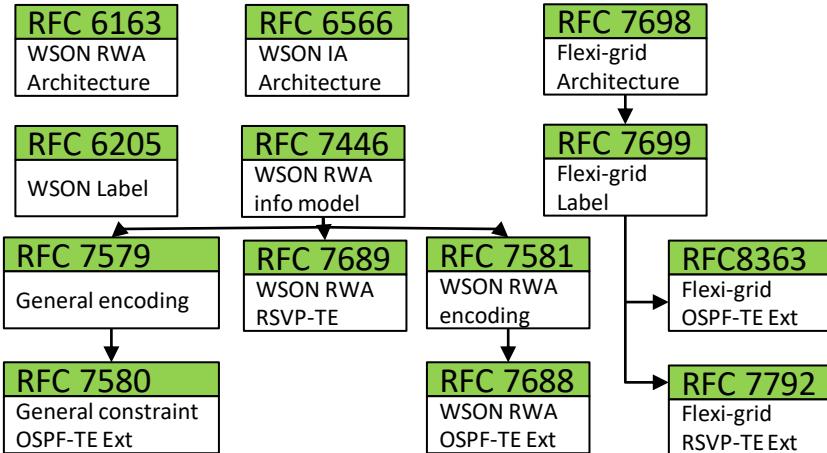

# IETF Protocol Work: GMPLS/PCEP

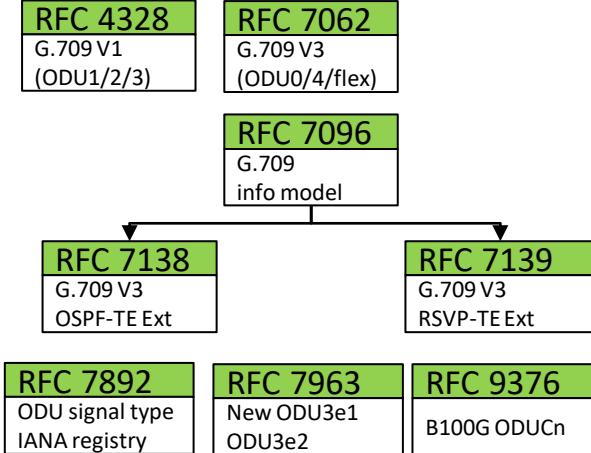

## Generalized Multiprotocol Label Switching (GMPLS)

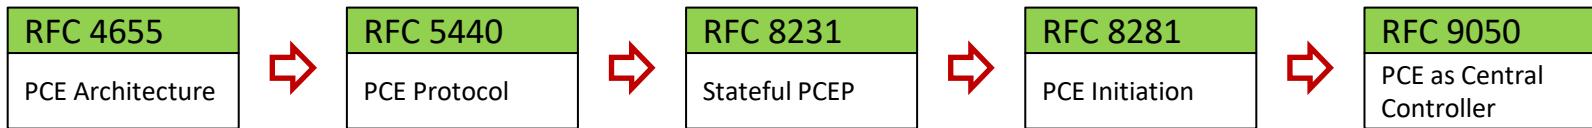

## WSON / Flexi-grid Control

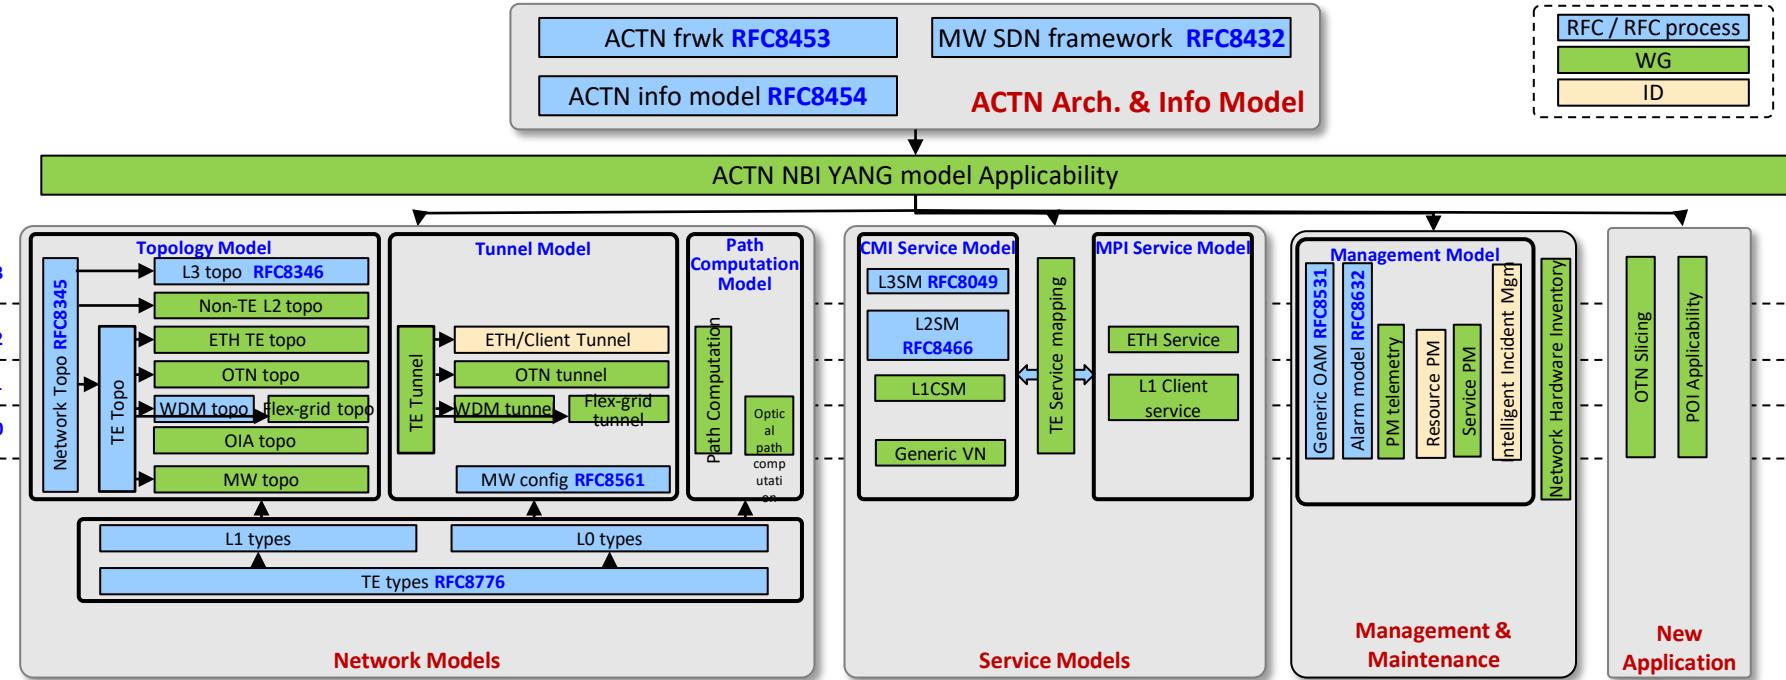

## OTN Control

## Path Computation Element (PCE) Protocol

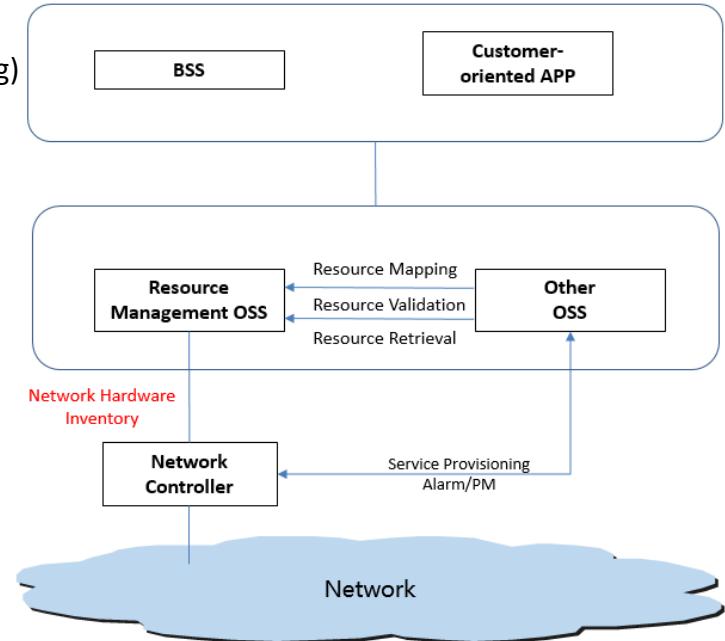

# IETF Data Models: T-NBI YANG

- Covers all **L0 ~ L3 network models**, including, e.g., IP/MPLS, OTN, WDM and Microwave
- Covers the **lifecycle management** includes the topology collection, service delivery, management & maintenance
- Models for **new applications** (e.g., POI, slicing) is starting

# Data Model for Inventory Management

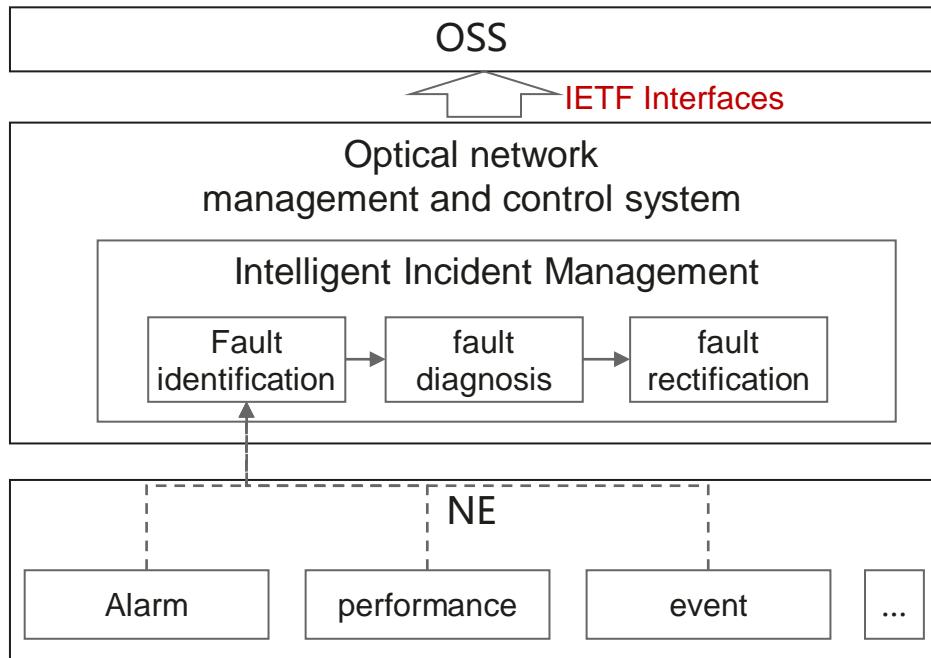

- Challenge:
  - Planning state ≠ Deployment state ≠ Engineering State
  - Manual planning, configuration and commissioning (time-consuming)
- Objective:
  - Make every components visible for retrieval
  - Fast convergence via streaming interfaces
- Enable-technology:
  - Resource Visualization: all data available in data set
  - Accurate Synchronization: real time update for changes
  - Forecast and Warning when risky
  - Automatically configuration for new boards/cards
- Standard effort:
  - Consensus on all the components
  - Clarify the relationship with Topology
  - Standard data model for multi-technologies

<https://datatracker.ietf.org/doc/draft-ietf-ccamp-network-inventory-yang/>

# Intelligent Incident Management

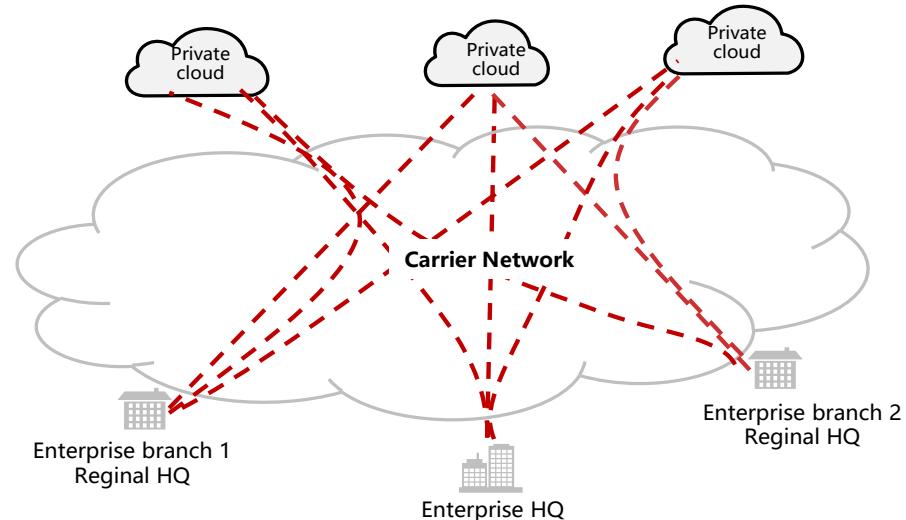

- Challenge
  - Duplicate visiting, inaccurate ticket distribution
  - Massive Alarms caused by one fibre cut
- Objective
  - Accurate Alarm
- Enable-technology
  - Alarm Database via automated collection
  - Root Cause Analysis (RCA) via AI algorithm
  - Procedure improvement on ticket dispatch
  - Integrated with GIS for accurate diagnosis
- Standard effort:
  - Consensus work flow
  - Aligned functional interfaces
  - Standard data model
  - Integrated with existing systems with software update

<https://datatracker.ietf.org/doc/draft-feng-opsawg-incident-management/>

# Agility: OTN connection to Cloud

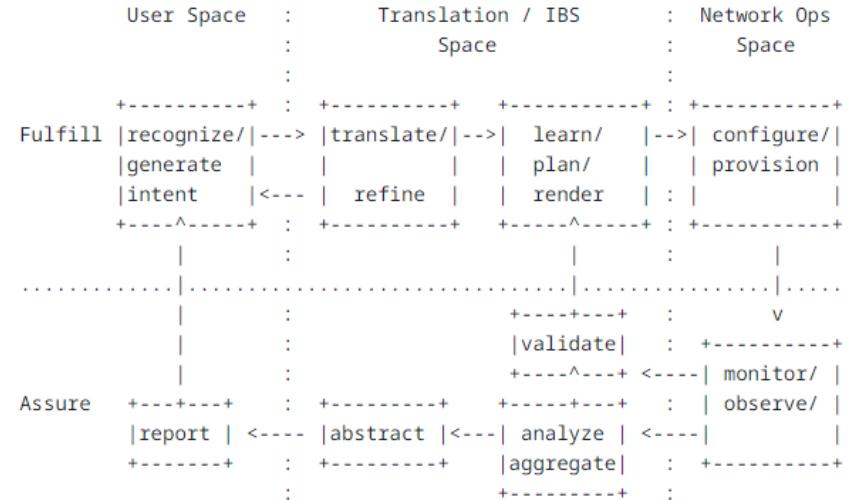

- Challenges
  - Cloud leased line: fast provisioning
  - Agility: dynamic bandwidth adjustment
- Objective
  - Construct connection to cloud for various users
  - With guaranteed qualities and reliabilities
- Enable Technology
  - One-hop Cloud Access for users
  - OTN technologies with 'finer grid'
  - Fast bandwidth adjustment of data plane
  - Reliability: 1+1+restoration, dynamic rerouting
- Standard effort
  - Scenario Descriptions and functional requirement
  - Gap analysis in architecture and protocol stacks
  - Protocol Extensions on routing, signaling etc.,

<https://datatracker.ietf.org/doc/draft-liu-ccamp-optical2cloud-problem-statement/>

# Intent-based Networking

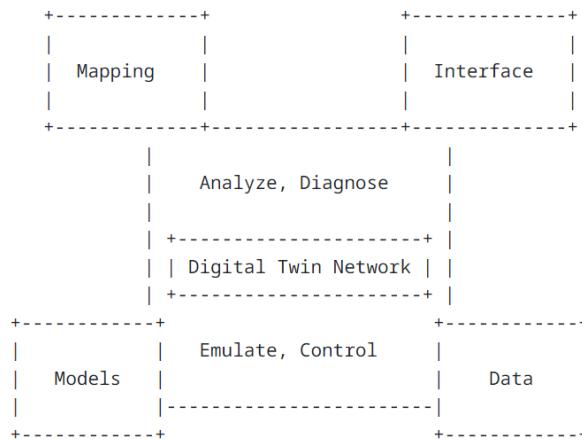

- Challenges
  - Large-scale network with multi-vendor, multi-tech
  - Users only own a few connections in the network
  - Complicated ‘constraints’ in practical operations
- Objective
  - Make user focusing on the output instead of procedure
  - Simplify the representation of complicated network
- Enable Technology
  - Fulfillment: interaction + translation + orchestration
  - Assurance: monitoring + validate + analysis
  - Abstract and Report for close-loop intent
  - APIs allow intent request and query
- IRTF effort
  - Investigate the intent demand for lifecycle management
  - Intent Representation: focus on ‘what’, not ‘how’
  - Collaboration with Service model and Policy
  - Intent Classification

<https://datatracker.ietf.org/doc/rfc9315/>  
<https://datatracker.ietf.org/doc/rfc9316/>

# Digital Twin enables Intelligence & Agility

- Challenges
  - Lack of insights of real-time network status
  - Difficulties in management of analogy signals for optical
- Objective:
  - A real-time representation of an entire network
  - Enhance network efficiency & predict behavior
  - Guide engineers on decision making via simulations
- Enable Technology
  - Real-time data streaming interfaces
  - Intent-driven network management inputs
  - Versatile AI algorithms
- IRTF effort
  - Investigating on Network DT UC and Applications
  - Converging on Network DT Architecture
  - Gap Analysis on APIs

<https://datatracker.ietf.org/doc/draft-irtf-nmrg-network-digital-twin-arch/>  
<https://datatracker.ietf.org/doc/draft-francois-nmrg-ai-challenges/>  
<https://datatracker.ietf.org/doc/draft-janz-nmrg-performance-digital-twin/>

# Summary

- Fundamental Protocol and data model work is maturing
  - GMPLS/PCEP Protocol Stack
  - YANG Data Model for Optical Management & Control
- IETF is driving the vision of Intelligence and Agility, includes
  - Intelligent solutions on specific management problem
  - Extend OTN coverage with higher reliability and agility solutions
  - Evolving from data model to intent-based networking for simplification
  - Architecturally integrated AI/ML in Digital Twin to enhance capabilities

# Thank you
